REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: With regard to claims 3,5,7,9,and 10, the prior art of record does not disclose or fairly teach the resistance value being inversely proportional to a tangent of the phase shift at a predetermined compensation frequency. With regards to claims 11-12, 37 and 38, the prior art of record does not disclose or fairly teach a capacitor coupled to an output of the OTA so as reflect an inductor at an input of the OTA. With regards to claim 14, 16-22, the prior art of record does not disclose or fairly teach determining a value of an effective negative resistance that results at least in par form bandwidth limitation of the active device in the active frequency selective circuit and providing in the active frequency selective circuit a compensation resistor that at the compensation frequency is effective to compensate the negative resistance. With regards to claims 23-31, the prior art of record does to disclose or fairly teach the first compensated reactive branch coupled between the input node and the intermediate node and the second compensated reactive branch coupled between the output node and the intermediate node. With regard to claims 32, and 34-36, the prior art of record does not disclose or fairly teach the compensation resistance is effective to compensate for a bandwidth limitation of the active device, the reactive component comprising a capacitance and wherein the compensation resistance comprises a compensation resistor having a resistance value that is inversely proportional to a product of a capacitance value of the capacitance and a tangent of a phase-shift at a predetermined compensation frequency.
